# Commercial Monitoring
Changes at a glance

For illion Decisoning Solutions (IDS) / Commercial B2B customers our new Commercial Monitoring solution delivers a range of improvements and new features to help you better monitor alerts that are critical to your business.

New Product Improvements

- **Alignment of features** – Monitoring functionality significantly updated for API integrated customers to closer align with our illion Direct Monitoring solution. This means you can easily manage your monitoring profiles and alerts across different channels.

- **Alert profiles** – Ability to set up monitoring profiles where you can decide what you would like to receive alerts on and for which entities.

- **A better way to monitor for score changes** – With the ability to choose destination score bands that trigger alerts based on your risk appetite.

- **Email notifications** – You can now receive email notifications of alerts from profiles that you are subscribed to; emails can be configured to go out for each individual alert or in summary format depending on what your business needs.

- **Customise what triggers alerts** – You now have the ability to choose what you would like to receive alerts on.
